

Customer Profile Storage

Store Valuable Customer Data In A Secure Environment

Concerned About Storing Sensitive Customer Data, Including Credit Card Information? You Should Be.

Use PayTrace and store your customers' profile information within our Payment Card Industry Data Security Standards (PCI DSS) Certified solution. No payment data is stored locally on your network, computer(s) or premises by PayTrace. All customer payment account numbers are encrypted as soon as they enter the PayTrace system. And, the data is stored in geographically remote and fully redundant high security data centers to ensure that it's always available to you.

Do You Want To Ask Your Customer For Their Payment Information Again, Or Would You Like To Have It Available At Your FingerTips?

Store customer credit card and checking account numbers as part of your customers' profile in order to quickly and effortlessly process payments. Storing payment information removes the burden of asking your customer for their payment information every time they make a purchase. It also provides you with confidence that you'll receive payment for orders that have been placed with you.

Who Is Most Valuable To Your Business? Your Customers. How Much Do You Know About Them? Want To Know More?

Store your customers' profile data and get to know them better. Have a record of their address for your next marketing campaign. Store their phone number so you can call when their order is going to arrive pleasantly early. Run reports on your customers' buying habits. What zip codes do you effectively pull customers from? Is that new billboard you put up across town having an affect?

The secure advantage.
