

Recurring & Repeat Payments

Save Time With PayTrace's Payment Options

Do Your Customers Make Regular Payments For The Same Amount At The Same Interval?

Use PayTrace's Recurring Payment option to automate these transactions. Recurring Payments can also be created through the Product and Payment/Donation Shopping Carts as well as the API.

Simply enter your customer's billing information, then set-up a Recurring Payment by defining a dollar amount and the frequency of the transaction.

Once a Recurring Payment has been created, it will process automatically.

Recurring Payments can be reviewed, modified, and canceled at any time. Recurring Payments can also be created through the Product and Payment/Donation Shopping Carts and through the API.

Do You Have Regular Customers But Their Payment Amounts Or Intervals Vary?

Use PayTrace's Repeat Payment features to quickly and efficiently process these transactions. Repeat Payments can be made at any interval and for any amount. The key is that the payments are processed using billing information that is stored in a customer profile. This will eliminate the need for you to repeatedly collect payment information from your customers.

PayTrace's Repeat Payments features are supported by the Virtual Terminal, Product and Payment/Donation Shopping Carts, and the API.

The Virtual Terminal allows you to process repeat payments for individual customers or for multiple customers at one time.

The Product and Payment/Donation Shopping Carts allow customers to save their payment information so that they may use the stored information for future orders.

The API allows 3rd party applications to initiate payments with just a customer identifier and the dollar amount, eliminating the need to store sensitive billing information in the 3rd party application.

The secure advantage.
